Digitalising food manufacturing for real-time visibility, control and traceability

VisionQMS is a fully flexible, end-to-end software application that transforms paper-based production processes providing real-time visibility, control and material traceability, with proven benefits. Our limitless design uniquely closes a gap in functional capability that ERPs constantly find impossible to address in food manufacturing.

Flexible modules, built to scale

VisionQMS is available in three flexible, scalable configurations, covering everything from QA and routine audit to a complete MES solution, including full production recipe control, QC, and container-level traceability for every raw material used and batch manufactured.

√ Quality Assurance (QA) and Routine Audit

Digitally transform routine tasks for auditing and compliance.

√ Quality Control (QC)

Digitise QC checks across intake and production.

> **Includes QA and Routine Audit**

√ Recipe Management & Manufacturing Execution System (MES)

Full control of material input and outputs, with container tracking and end-to-end batch traceability from intake to despatch. Eliminate waste, minimise giveaway, improve production accuracy and adherence to specification in-process.

VisionQMS links to any equipment, including scales, metal detectors and depositors, to combine both automatically captured and operator-recorded data, providing full MES capability.

> **Includes QA and Routine Audit, and QC**

Make quality management a competitive advantage

Operational efficiency and cost-control

"Accuracy and process control improved from the start. Shorts and overs no longer happen"

Fresh and cooked components supplier

Food safety and product recalls

"Errors have been captured in real time and have not gone out the door."

Major added value shellfish producer

Workforce challenges

"We rely on non-English-speaking workers, so we're very excited that VisionQMS enables them to use their own languages!"

Major chilled ready meals manufacturer

Customer compliance and traceability

"We rework our pastry over a 7-day cycle, so a full trace could take hours for BRC audit. We can now report in minutes and are always ready."

Major pork pie manufacturer

Capabilities and benefits: what can VisionQMS help you to achieve?

- Drive profitability through manufacturing excellence
- Improve product quality and consistency
- Automatically create works orders directly from production plans
- Replace paper across QA, QC and production using tablets or fixed terminals
- Enable data-driven decision making to promote continuous improvement
- Ensure food safety and health and safety compliance, now and in the future
- Achieve full material traceability instantly
- Integrates with your ERP system, eliminating blind spots in production
- Digitise any process with VisionQMS's ultra-flexible configuration

- Optimise production accuracy and eliminate shorts and overs
- Link production recipes with their processes
- Streamline processes to boost efficiency and productivity
- Gain real-time visibility for improved control of manufacturing operations
- Prevent errors and costly recalls, protecting your revenue and reputation
- Improve yield and eliminate waste and giveaway
- Provide one clear view of production from a single database
- Automatically capture data from scales, probes, chillers, metal detectors and more
- Achieve 100% completion and always be ready for unannounced audits

> *"Our bottom line is around 1% better off year-on-year"*
> **Adam Clarke, Director, Freshcut Foods**

FRESHCUT FOODS

Seamless integration with your existing IT systems

VisionQMS exists to enhance visibility of your manufacturing environment because ERPs continually fail to manage the flexibility demanded by food manufacturing industry. VisionQMS is designed to work alongside your ERP and other existing systems instead of replacing them, and avoiding the associated costs, risks and disruption.
